DDGS Agrow Feed™ 90

Agrow Feed™ 90 – a palatable and sustainable protein feed from Lantmännen Agroetanol AB in Norrköping, Sweden.

Agrow Feed™ 90 is a pelletized Distillers dried grains with solubles (DDGS), a protein feed that is produced in the production of ethanol. The raw material for ethanol production consists of grains and other starchy and sugar containing products. The fermentation gives a protein feed with low starch content and low pH, which is positive for the palatability. The low pH in combination with yeast from the production process also gives a positive effect on gastrointestinal health. The fermentation process concentrates nutritional benefits of grains in the form of protein, fat and minerals.

The feed material contributes to energy efficiency and responsible climate benefits by reducing carbon dioxide emissions, providing one of the most sustainable protein feed materials on the market.

Certificate of analysis Agrow Feed™ 90 DDGS

Nutritional value	Per kg dry matter	Per kg feed
Dry matter, %	100	89
Water, %	0	11
Crude protein, g	354	315
Starch, g	22	19
NDF (Fibertec), g	285	254
Crude fiber (FiberCap), g	70	63
Crude fat, g	69	62
Ash, g	52	46

Feeding recommendations

Agrow Feed™ 90 is suitable for cattle feeding plans where the roughage is moderate in protein content and high in fiber concentration. Agrow Feed™ 90 works excellent in combination with corn. The protein in Agrow Feed™ 90 is easily digested and the feeding plan needs to be supplemented by other sources of proteins, which adds rumen stable protein. Optimize with other feed materials to ensure the nutritional requirements of the animal.

Proportion of total feed ration:

Dairy cows 20 %

Young cattle 15 %

Beef cattle 20 %

Agrow Feed™ 90 also gives an opportunity to lower feed costs and to provide protein to other types of animals, such as swine, horses and poultry.

Our product is not suitable for feed aimed for professional/running horses due to the possibility of traces of theobromine. The amounts of theobromine are guaranteed to be below the threshold allowed of theobromine content¹ in any compound feed.

¹ Directive 2002/32/EC of the European Parliament and of the Council of 7 May 2002 on undesirable substances in animal feed
